

AstraVeris

Independent space-finance intelligence — weekly analyst briefing, SAI, ARI, and launch reliability.

THE NUMBERS

LAUNCHES TRACKED 7,130	COMPANIES SCORED 101	ARI AVG 56.3	SAI COMPOSITE 58.1
GRANTS INDEXED 9,443	ORBITAL OBJECTS 68,759	DEBT TRANCHES Pending	ISSUES PUBLISHED 1

POSITIONING

AstraVeris is an independent space-finance intelligence platform publishing a weekly analyst briefing, a 21-factor Space Accessibility Index, a 20-factor company risk score (ARI) across 100+ space companies, and a live reliability dataset of 7,000+ launches.

What is novel: a Success / Partial-Failure / Failure reliability split the insurance market prices against but no public tracker publishes; a debt-maturity-wall extraction pipeline pulling tranche-level data from 10-K footnotes; and an Ollama-first architecture that runs high-volume inference locally on Gemma.

Differentiator: Seradata tells you what flew and what failed;
AstraVeris tells you what is about to lose money.

WHO IT IS FOR

- Consumer — retail investors and space-curious readers wanting analyst-grade briefing.
- Insurance — underwriters and MGAs pricing launch, hull, and in-orbit risk against S/PF/F.
- Government — SBIR/STTR, DIU, SpaceWERX, SDA evaluating commercial partners (EAR99).

FOUNDER

Brandon M., Founder

AstraVeris was founded in 2026 to close the analytical gap between the space industry's operational growth and the financial community's ability to underwrite it. Every metric ships with published methodology; every deal mention leads with the capital-markets "so what."
